

WHAT IS CLAIMED IS:

1. A portable phone having a recording function for recording audio data during telephone conversation, said portable phone comprising:

a plurality of memories (11, 12), each of which is for endless-recording, as a conversation content, the audio data during the telephone conversation;

a switching unit (9, 71, 72) capable of switching said memories from a first memory of said memories to a second memory of said memories so that said second memory endless-records the audio data instead of said first memory which endless-records, as the conversation content, the audio data until then; and

a reproducing unit (9, 10, 3) for reproducing the conversation content which said first memory endless-records before being switched by said switching unit.

2. A portable phone as claimed in claim 1, wherein said memories are constituted by a plurality of memory areas (11, 12) of a single memory device, said memory areas being capable of individually endless-recording the audio data.

3. A portable phone as claimed in claim 1, further comprising a key (71, 72) for operating said reproducing unit to reproduce the audio data;

said reproducing unit successively reproducing the conversation contents in the order of recording in which said memories records the conversation contents.
